Project Information

Project Name:

Natalie Creek Box Culverts, Midlothian, IL

Amount Requested:

\$937,000

Project Description:

For many years the Village of Midlothian has experienced flooding damage due to undersized, deteriorated culverts on Natalie Creek as it crosses Keystone, Karlov and Keeler Avenues. The culverts have become a restriction point during moderate to heavy rain and have been the cause of upstream flooding not only in Midlothian, but in Oak Forest and Tinley Park. At this point the aging culverts have actually been the source of streets collapsing, which have required emergency repairs just to keep the streets passable to traffic. The Village has completed preliminary engineering for the project which would replace the existing triple 24" corrugated metal culverts with triple 3'X7' concrete culverts.

Intended Recipient of Funds

Village of Midlothian

14801 Pulaski Ave

Midlothian, IL 60445

Explanation of the request:

This project would serve taxpayers well by allowing them a safe and predictable means to access local businesses, their homes, and other facilities. Additionally, this project would save thousands of dollars in spending related to flood damage in 3 distinct communities: Midlothian, Tinley Park, and Oak Forest Illinois.
